About me

I am a passionate software engineer adept at bringing forth expertise in designing, Developing, testing, and maintaining software systems. Apart from my technical skills, I possess very strong management and leadership abilities, along with quick learning aptitude. I am actively seeking an opportunity to further enhance my skills, contribute to the growth of the organization, and continue my professional journey.

Experience

Software Engineer

Integra Micro Systems Pvt Ltd   AUG 2021 - Present

Integra is a leading provider of innovative hi-technology products and solutions in the Government, BFSI and telecom space.

- Worked on a Financial Inclusion product named Fi Stack and multiple supporting applications like Business Correspondent Audit Application.
- Developed modules including AEPS transactions, Enrollments, Lead Generation, and Ease Services.
- Upgraded Financial Inclusion products to dynamic, database-driven applications using MERN stack.
- Led team of developers in completing minor projects, bug resolution, and enhancements.
- Mentored junior developers, conducting code reviews to ensure quality standards.
- Utilized technologies like React, Node.js, Express, and JavaScript to enhance Seneca-based microservice architecture.
- Presented and demonstrated products to clients, collaborating closely with management to showcase functionality and value.

CRM & Social Media Marketing

VeggieKart   JUL 2020- NOV 2020

VeggieKart is a farm-to-food retail initiative , offering consumers fresh vegetables at competitive prices.

- Took on diverse responsibilities including developing growth strategies, collaborating with social media influencers for marketing, and reviewing website functionality and appearance to enhance user experience.
- Conducted targeted campaigns aimed at winning back churned customers, employing strategies to re-engage them with the brand.
- Actively engaged with customers to gather feedback firsthand, facilitating direct interactions to understand their needs and preferences.
- Despite the short duration, the experience provided valuable insights and skills, fostering personal and professional growth through exposure to a variety of situations and challenges.

Personal Projects

Task Manager

Created a Project which can manage the task within a team.The team manager can view and assign the task to different member.Each of the member can check and close it.

Expense Tracker

Focusing on my React skills, I created this application in react where you can add your expense and track it.The application is capable of generating the daily, monthly and weekly expense reports.

Blog

An application based on a microservices architecture, built using Node.js and React as its core, can be utilized for various functionalities such as creating posts, commenting on posts, and performing edition & deletion operations, among others.

React-NetFlix clone

React Netflix clone is a sleek application built using React that mimics the design of Netflix. Users can browse movie grids, search for specific films, and view basic details about each movie. While streaming functionality isn't implemented yet, the app lays the groundwork for future integration. It features a responsive design, modular components, and API integration for fetching movie data. Overall, it provides users with an intuitive platform for discovering and exploring a variety of movies.

Markdown to Html converter

Markdown to HTML converter is a real-time application built using React, Node.js, Express, Socket.io, and MongoDB. Users can input Markdown text and instantly convert it to HTML. They can copy the generated HTML, render it in a new tab, write it to a file, and save it to MongoDB.
